L.O: To solve addition problems.

Forty-seven plus thirty-nine equals seventy-six.

True or false? Convince me.

Write a number to complete each statement.

35 + 39 > ☐

56 + 27 = ☐

64 + 28 < ☐

19 + 23 > ☐

45 + 46 = ☐

76 + 15 < ☐

You will need to work out the answers to the numbers sentences first. You will then be able to write a number that is more than, less than or equal to your answer.

Further challenge!

Can you create a calculation where there will be an exchange in the ones, and your answer will have two ones and be less than 100?

There are lots of possible solutions.

E.g. $33 + 29 = 62$
