

Paper plate Puffin

This has been an
"art jumpstart"
by Darrell Wakelam

This idea is another 'Pure Make'
which is what I call a project where you
can use every scrap of the original starting
materials without any mess or left-overs. Have a go.

1 - Cut a paper plate like this.

4 - Take the two leg pieces, fold up the foot and squeeze the leg to make it more 3D, then tape to the body.

6 - Cut the final piece of the plate like this . . .

Cut slits and push in the eye socket . . . roll up some tape into a ball and push this in for an eye.

2 - Make a couple of slits in the body and pull this together.

5 - Cut two pieces for the beak from the remaining part of the plate. Save the rest.

7 - The very last piece, could be a wing (top) . . . or even

a fish in the mouth like I've done here?
