

Place Value Game: Teen, Ty and Ty-One Numbers

4 Player Game.

You will need:

8 red counters, 8 blue counters, 8 green counters, 8 yellow counters and a 1-6 dice.

Instructions:

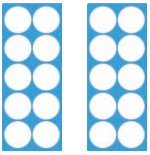

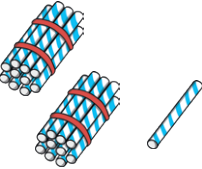

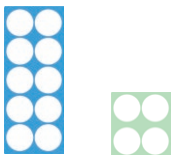

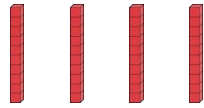

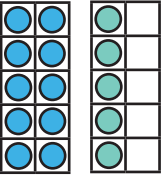

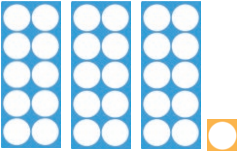

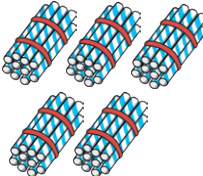

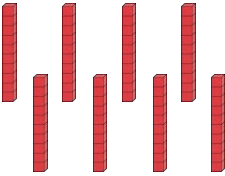

Give each player a set of matching coloured counters.

Players place one counter each on the starting position on the board. They take turns to roll the dice and move their counter clockwise around the board.

Players must look carefully at the mathematical representation on the square they have landed on and place one of their counters on the matching number in the centre of the board. If the number is already covered, they miss a go.

The winner is the first person to use all their counters or the player who has covered the most numbers in the centre of the board with their counters.
